WiFi Extender Pods by Plume®

**When it comes to your WiFi signal, GCI has you covered!**

To extend your coverage, simply plug the enclosed pod into a wall outlet *in* or *near* the area where improved coverage is needed. It's that simple! The pod will need to boot up and may take a few minutes to update, but after that, it will automatically work with your WiFi modem to create a wireless "mesh" for all your devices. **Happy connecting!**
